PROFESSIONAL SUMMARY

Computer Engineering undergraduate (CGPA: 8.17/10) with hands-on experience in cybersecurity, network security, threat detection, and full-stack web development. Proficient in Python, machine learning, packet analysis, and modern web technologies including React, Node.js, and PostgreSQL. Proven ability to design and deploy secure, production-grade applications with expertise in vulnerability assessment, intrusion detection, and software security best practices.

EDUCATION

Bachelor of Technology in Computer Engineering
Madhuben and Bhanubhai Patel Institute of Technology
• **CGPA:** 8.17 / 10

2023 – 2027
Gujarat, India

EXPERIENCE

Full Stack Web Development Intern
Aexaware Infotech Private Limited

May 2026 – June 2026
Vadodara, Gujarat

- Developed full-stack web applications across frontend, backend, and database layers using modern JavaScript frameworks and containerization technologies
- Built React applications leveraging React Hooks, Context API, useReducer, React Router, and React Hook Form for dynamic state management and form handling
- Implemented secure authentication systems using JWT and bcryptjs to protect user credentials and session management
- Developed RESTful APIs with Node.js and Express.js, designing endpoints for frontend-backend communication and data persistence
- Designed and integrated PostgreSQL databases with Prisma ORM for efficient data modeling, querying, and application-database communication
- Deployed full-stack applications to production using Vercel (frontend) and Railway (backend), implementing containerization with Docker for consistency across environments
- Managed version control and collaborative development workflows using Git and GitHub throughout the internship
- **Projects:** Movie Search Application, E-Commerce Product Page, Blog REST API, Full Stack Task Manager Application

PROJECTS

MITM Attack Detection Using Machine Learning | *Python, Wireshark, PCAP Analysis, Machine Learning*

- Developed a Python-based network traffic analysis system that extracted packet-level features from PCAP files to detect ARP spoofing attacks in controlled environments
- Analyzed ARP requests, replies, and packet behavior through automated feature extraction and pattern recognition
- Implemented a machine learning detection pipeline that classified suspicious traffic by processing engineered network features from captured packets
- Validated detection methodology in a virtual lab using simulated MITM attack traffic to confirm detection accuracy

AI-Based Phishing Attack Detection System | *Python, Machine Learning, Email Security* Academic Project

- Developed a phishing detection system that classified malicious emails and URLs across 5,000+ samples by extracting and analyzing phishing indicators
- Achieved 95% detection accuracy by engineering features from URL structures, sender information, and email content characteristics
- Reduced false positives by 30% through iterative model tuning and detection threshold optimization
- Identified and classified multiple real-world attack patterns including domain spoofing, phishing links, and deceptive email characteristics

Data Duplication Alert System (DDAS) | *Python, Data Processing, Automation* Academic Project

- Developed a Python-based duplicate data detection system that identified and flagged redundant records in datasets through custom detection logic
- Automated duplicate identification and alerting workflows to improve dataset consistency and data reliability
- Implemented data processing pipelines to continuously monitor for duplicate and inconsistent entries

TECHNICAL SKILLS

Programming Languages: Python, JavaScript (ES6+), C++, Java

Cybersecurity: Network Security, Threat Detection, Vulnerability Assessment, Intrusion Detection, ARP Spoofing Detection, Security Monitoring, Packet Analysis

Frontend Development: React, React Hooks, Context API, useReducer, React Router, React Hook Form, Tailwind CSS

Backend Development: Node.js, Express.js, REST API Development, JWT

Databases & ORMs: PostgreSQL, Prisma ORM

Security Tools: Wireshark, Nmap, Burp Suite, OpenVAS

Developer Tools: Git, GitHub, Docker, Containerization, Vercel, Railway

Networking: TCP/IP, DNS, DHCP, Routing, Switching, OSI Model, PCAP Analysis

Operating Systems: Linux, Windows

CERTIFICATIONS

Google Cybersecurity Professional Certificate

EC-Council: Information Security Fundamentals, Information Security Analyst Professional Certificate

Microsoft: Introduction to Generative AI for Developers with Copilot, Boost Your Productivity with GitHub Copilot, GitHub Copilot for Project Management

ADDITIONAL INFORMATION

Languages: English, Hindi, Gujarati
